

Protein Skimmer for installation inside the filtration tank

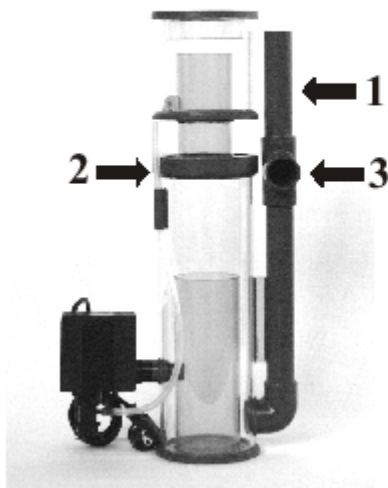

110-F2000

Every H&S Protein Skimmer is built with an adjustable output of the water to reach the maximum skimming results.

H&S

It is easy to adjust the water level in the protein skimmer by turning the pipe (1) left or right.

When the two grey points are at the same place, the output has been opened to the maximum. The water level standard is the beginning of the bayonet catch (2).
